On the Cover

MAFES scientists are teaming with researchers in other Southern states to study how crossing Holsteins with a breed popular in Brazil may help dairy producers reduce summer heat-stress problems.

Back Cover

Mississippi's Research and Extension Centers and branch stations.

4 ASTA Tour Puts Remote Sensing in the Spotlight

The Advanced Spatial Technologies in Agriculture brought participants from diverse fields to Stoneville and Brooksville for a look at how the latest remote sensing technology is applied to agriculture.

6 Cotton and Rice/Soybean Field Days

Growers, industry representatives and others participated in the Delta Research and Extension Center's tours of current research with Mississippi's top row crops. Participants in the Cotton Field Day also had an opportunity to check out SCAN, the latest in agricultural weather technology.

8 Ag Econ Textile Industry Study

How is the slowdown in the apparel manufacturing industry affecting the state and nation? A study by two MAFES economists found some answers.

9 International Insect-Rearing Workshop

They're coming from around the world to learn how to grow a new crop—bugs! A new series of workshops at MSU is attracting a lot of attention from entomologists.

10 Crossbreeding Holsteins with Girs Improves Heat Tolerance

Some bouncing babies at the Dairy Research Unit are helping in research to improve heat tolerance in the South's dairy herds.

12 Fall Garden Days Bring Visitors to Verona and Crystal Springs

Young, old and all ages in between came out to enjoy the annual flower and garden tours at the North Mississippi Research and Extension Center and the Truck Crops Branch Experiment Station.

13 Poplarville Hosts Ornamental Horticulture Field Day and Herbaceous Open House

Visitors to the South Mississippi Branch Experiment Station saw a host of plants well-adapted for home landscapes, as well as plans for a new facility at the Poplarville site.

14 North Mississippi Agronomy Field Day

Producers of North Mississippi's major row crops saw the latest research in support of their enterprises during the 2002 tour of the North Mississippi Research and Extension Center.

15 Catfish Diets

MSU scientists are finding that when it comes to catfish, less protein still makes a good diet.

16 Mosquito Wingbeats

MAFES researchers are finding clues to mosquito control in how various species flutter their wings.

17 In Brief

A quick look at research and events at the Experiment Station.

19 Updates

Meet award-winning MAFES personnel.
