

WEED IDENTIFICATION AND WEB RESOURCES

Good judgment, representative field scouting, and proper weed identification are critical in obtaining appropriate recommendations. Several weed identification publications are available to aid in identifying weeds, such as the Southern Weed Science Society's Southern Weed ID Guide and Encyclopedia of North American Weeds DVD. The Southern Weed ID Guide is available as a manual or DVD with more than 2,400 full-color photographs of 447 weed species, along with an interactive key, distribution maps, and descriptions. The DVD also has an interactive tutorial on principles of weed identification, including plant taxonomy, morphology, and terminology. The Interactive Encyclopedia of North America DVD has an expanded array of weed species and excellent tutorials. Lastly, Forest Plants of the Southeast CD is an excellent weed identification tool with great images and descriptions of wildlife uses for many weeds. For purchasing information, contact the Southern Weed Science Society by mail at 1508 West University Avenue, Champaign, IL 61821-3133 or by telephone at 217-352-4212.
